DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Harshberger et al. in view of Bolton et al. and further in view of Finkelstein et al. Harshberger et al. disclose a panel mountable electronic device 22 comprising a housing 110, 112, 114, 120 with a heat sink 109 (col. 5, lines 13-17), the housing including a flange 110 with a through hole, a tab 174 rotates of about 90 degrees to clamp a portion of a panel between the tab and the flange, the tab is received in the recess. Harshberger discloses the claimed invention except the threaded hole in the tab and a screw being engaged with the thread hole in the tab. Bolton discloses the screw being engaged with the threaded hole in the tab. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to have the screw as disclosed by Bolton instead of a locking assembly as disclosed by Harshberger. Harshberger discloses the claimed invention except the slanted portion of the tab, which facilitates forcible clamping the panel and the tab by further rotation. Finkelstein reference as other references cited in US PTO 892 Form discloses the latch having a cam portion facilitating the forcible clamping, therefore it would have been obvious at the time the invention was made to a person having ordinary skill in the art to use the

slanted portion as disclosed by Finkelstein in the structure disclosed by Harshberger. Harshberger discloses the claimed invention except for materials such as metal or plastic. It would have been obvious to one having ordinary skill in the art at the time the invention was made to, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416. Harshberger discloses the claimed invention except specifying the device being an optical transceiver and optical fiber connectors. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the arrangement for an optical transceiver since it has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex parte Masham*, 2 USPQ2d 1647 (1987).

The method steps of claims 11-18 are necessitated by the device structure as disclosed by Harshberger et al. in view of Bolton et al. and further in view of Finkelstein et al. It also must be noted that the claimed structure having rotational locking device engaged with a recess in an adjacent panel is widely known and used in many domestic applications. Details drawn to a notch in the housing to slidably engage an edge of a board are well known in the art as shown in the prior art cited in PTO 892 Form is not used at this time and these details not considered to be demonstrated as critical therefore obvious.
